

Instant Visibility. Threats Averted.

RedSeal Systems Forms Technical Advisory Board

Security experts to bring practical leadership and visionary insight to security risk management innovator

REDWOOD SHORES, Calif. – May 17, 2007 – RedSeal™ Systems Inc., the leader in innovative security risk management (SRM) solutions, today announced the formation of its Technical Advisory Board, comprised of top security experts from Cisco, The Weather Channel and PayPal. RedSeal is committed to driving leadership and innovation in the security risk management space, and the new RedSeal Technology Advisory Board members bring together some of the best minds in the industry to help ensure that RedSeal products continue to address the needs for security risk management in the enterprise.

The new RedSeal Technology Advisory Board is comprised of highly respected and accomplished technology executives. Among them, these individuals have overseen and helped architect some of the largest, most critical networks in corporate America today, ensured the security of more than 100 million customer's sensitive data, been named one of the 50 most powerful people in networking by *Network World* magazine, one of ITSecurity.com's 59 top influencers in the security industry, and hold numerous security certifications. John Stewart, CSO of Cisco Systems, will serve on the RedSeal Technical Advisory Board alongside John Penrod, CISO of the Weather Channel, and Michael Barrett, CISO of PayPal.

"I believe in the approach RedSeal is taking to help network and security professionals better understand their network risks, and am looking forward to participating as a member of the RedSeal Technical Advisory Board," said John Stewart, vice president, chief security officer, Cisco Systems, Inc. "Configuration analysis, offline network modeling, and especially the ideas and recommendations RedSeal's technology provide can help simplify and accelerate risk reduction."

"Our Technical Advisory Board is comprised of individuals that will help us understand the challenges customers are facing today when it comes to getting a firm handle on their security and compliance stance," said Alain Mayer, PhD, chief technical officer of RedSeal. "Our products are focused on pro-actively managing security risks – so the input and first-hand experience of our Technical Advisory Board will be invaluable as we evolve our products."

RedSeal Technical Advisory Board Members

- **John Stewart, CSO, Cisco Systems** – John Stewart provides leadership and direction to multiple corporate security teams throughout Cisco, strategically aligning with business units and the IT organization to generate leading corporate security practices, policies, and processes. The Corporate Security Programs Organization focuses on global information security consulting and services, security evaluation, critical infrastructure assurance, eDiscovery, source code security, identification management, as well as special programs that promote Cisco, Internet, and national security. Additionally, he is responsible for overseeing the security for Cisco Connection Online, the infrastructure supporting Cisco's more than \$28.5 billion business.

- **John Penrod, CISO, The Weather Channel** – John Penrod is the Chief Information Security Officer for The Weather Channel. John has worked in Information Technology for almost 20 years, with over seven years focusing on the field of information security.
- **Michael Barrett, CISO, PayPal** – Michael Barrett is the chief information security officer for PayPal. In this role, he is responsible for ensuring the security of PayPal's 133 million accounts worldwide. He oversees the information systems and services that protect the integrity and confidentiality of PayPal customer and employee information.

About RedSeal Solutions

RedSeal provides security risk management solutions that give instant visibility into the threats that leave an open door to valuable company resources. RedSeal Security Risk Manager (SRM) **maps** the entire infrastructure, **measures** its relevant risk, and **mitigates** its exposure.

- **Maps:** RedSeal SRM automatically audits your entire network infrastructure including all network resources, security devices and hosts to compile an end-to-end and up-to-date map of these resources and their relationships
- **Measures:** RedSeal SRM pinpoints which assets are exposed then assigns a risk value for meaningful measurement
- **Mitigates:** RedSeal SRM prioritizes vulnerabilities that you need to **find-and-fix** before an exploit so you can mitigate your risk profiles and focus on the most important assets first

About RedSeal Systems

RedSeal Systems Inc. provides security risk management applications that map, measure, and mitigate resource security so security professionals can remediate exposures on enterprise infrastructures before a security breach occurs. Founded in 2004, RedSeal is privately held. For more information, visit www.redseal.net.
