

Instant Visibility. Threats Averted.

## **RedSeal Systems Selected to Present at Technosium 2008**

*CSO Brian Laing to focus on proactive security and how enterprises can leverage their existing security infrastructure and investments*

**REDWOOD SHORES, Calif. – January 28, 2008-** RedSeal™ Systems Inc., the leader in innovative Security Risk Management (SRM) solutions, today announced chief security officer Brian Laing is among the industry experts that have been selected to present at Technosium 2008 Conference & Expo taking place January 29-31, 2008 at the Santa Clara Convention Center in Santa Clara, California. Technosium is an international event focused on information security, storage, software, networking and wireless technologies.

Laing will present, “Proactive Security: Getting the Most from What is Deployed” on January 31, 2008 from 2 - 2:55 p.m. in room 206. The session will focus on the need for today's networks to be highly dynamic to keep pace with the increases in security complexity. Security teams need to be able to audit the network on demand so that they can assess the security impact of network changes and new threats in real time. Laing will provide an overview of the best practices and technologies that have emerged to automate the identification and measurement of network security risk so that security teams can make sound security management decisions, learn how to make the most of an enterprise's existing security tools, and most importantly, how daily use of proactive security best practices will help security teams act ahead of an exploit or security incident.

“By utilizing best practices, security teams can get the most value from deployed security tools and be able to better and more easily track network security as a whole,” said Laing. “We've conducted extensive research in security risk management and continue to update our RedSeal Threat Reference Library, which currently tracks more than 28,000 threats and is dynamic proof that network security is more complex today than ever before. In this session, we plan to provide attendees with the tools necessary for making the most out of their current security solutions and most importantly, provide them with information on risk management best practices that will help them better evaluate their existing security infrastructure.”

### **About Technosium 2008 Conference & Expo**

Technosium 2008 is a premiere international Information Technology and Wireless & Mobile Broadband Telecommunication conference and expo for technology professionals from around the world. The dual focus of the event is Enterprise IT WORLD and Wireless and Mobile Broadband Telecommunications. More than 150 vendors will participate at this educational and networking event for the corporate market, public sector, technology professionals and the venture capital community. For more information about the conference please visit: <http://www.technosium.com/conference/index.htm>.

### **About RedSeal Security Risk Manager (SRM)**

RedSeal provides security risk management solutions that give instant visibility into the threats that leave an open door to valuable company resources. RedSeal Security Risk Manager (SRM) **maps** the entire infrastructure, **measures** its relevant risk, and **mitigates** its exposure.

- **Maps:** RedSeal SRM automatically audits your entire network infrastructure including all network resources, security devices and hosts to compile an end-to-end and up-to-date map of these resources and their relationships

- **Measures:** RedSeal SRM pinpoints which assets are exposed then assigns a risk value for meaningful measurement
- **Mitigates:** RedSeal SRM prioritizes vulnerabilities that you need to **find-and-fix** before an exploit so you can mitigate your risk profiles and focus on the most important assets first

### **About RedSeal Systems**

RedSeal Systems Inc. provides security risk management applications that map, measure, and mitigate resource security so security professionals can remediate exposures on enterprise infrastructures before a security breach occurs. Founded in 2004, RedSeal is privately held. For more information, call 888-845-8169, visit [www.redseal.net](http://www.redseal.net) or e-mail [sales@redseal.net](mailto:sales@redseal.net).
