REDSEAL
TEST DRIVES

See for yourself how RedSeal's cyber terrain analytics platform gives you unmatched visibility into what's on your network, how it's connected and the associated risk. Spend no more than an hour and take a RedSeal Test Drive—a self-paced, hands-on tour through an interactive network environment.

There are four different RedSeal Test Drives to choose from. Take one or as many as you want!

Compliance Test Drive

- Using RedSeal's industry-based best practice checks, find misconfigured network devices that are less secure—with weak or default passwords, unsecure protocols and more.

- See how RedSeal helps you stay in compliance with standards such as DISA STIG/SRG checks and CIS Benchmarks.

Incident Investigation Test Drive

- From an indicator of compromise, discover how RedSeal shows you what it is, where it is, where an attacker could go, and options for containment.

- When management learns about new malware and asks if your network is susceptible, use endpoint data in RedSeal to provide an initial yes or no.

- Next, see how RedSeal enhances that data with detail where it is and where the malware can go.

Vulnerability Management Test Drive

- After you get an alert about a new vulnerability, see how RedSeal analyzes the risk to your network and helps you prioritize which devices to patch first.

Change Management Test Drive

- Before you make changes to open ports or protocols, discover how RedSeal analyzes the risk a change would introduce into your network.
