

REDSEAL UNIVERSITY FUNDAMENTALS OF REDSEAL COURSE FOR A SINGLE CUSTOMER

RedSeal University presents Fundamentals of RedSeal, a modern learning approach that blends digital eLearning with instructor-led virtual training, guiding, and answering questions in a virtual session dedicated to one customer. This option is ideal for a large customer who wants to train multiple teams on RedSeal or bring various stakeholders together to build a robust security program around RedSeal. This creative learning model provides learners with thorough hands-on experience supported by how-to videos, step-by-step lab documents, and periodic instructor-led webinars.

Our course provides an ideal learning experience for RedSeal System Administrators, Cloud Security, Risk and Compliance, Vulnerability Managers, Network Security Teams, and Security Analysts. The course helps customers understand the RedSeal platform features and functions along with security business outcomes. Learners benefit from the guidance of cybersecurity experts who will help explain using RedSeal to gain visibility into your cyber-attack surface to proactively protect and decrease the cost of dealing with known threats. The training also allows the users of RedSeal to increase the speed of dealing with new threats or security changes.
