RedSeal Report Studio

Turn exposure insights into tailored reports that demonstrate measurable risk reduction.

Challenge & Solution

Exposure management is only effective if progress can be demonstrated. Yet most security teams struggle with reporting:

- Standard reports fail to reflect hybrid environments and unique stakeholder needs
- Custom reporting requires coding, consultants, or manual rework
- Executives and boards demand clear proof of exposure reduction and compliance progress

RedSeal Report Studio changes this.
Built on the RedSeal Platform, Report Studio transforms raw findings into stakeholder-ready reports. With drag-and-drop design, pre-built queries, flexible visuals, and white-label branding, teams show how exposures are discovered, prioritized, and reduced — all in a language every audience understands.
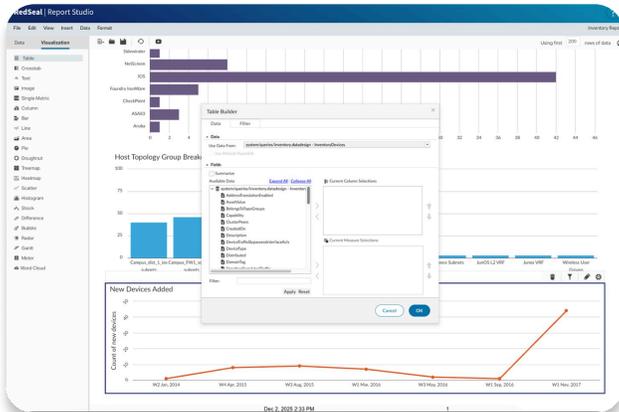

Benefits & Outcomes

With RedSeal Report Studio, teams turn exposure data into clear, credible reports that drive action and build trust. Tailored views for executives, managers, and analysts cut noise, strengthen accountability, and show measurable risk reduction while saving time and avoiding consultant costs.

Key Benefits

✔ **Prove exposure reduction with tailored, stakeholder-ready reports**

✔ **Save time by building and customizing in minutes, without coding or consultants**

✔ **Communicate clearly by delivering the right view to executives, managers, and analysts**

✔ **Strengthen credibility with branded, board-ready reports tied to exposure outcomes**

✔ **Reduce costs by eliminating dependence on consultants or custom tooling**

How It Works

RedSeal Report Studio builds on RedSeal's exposure management model to convert complex data into stakeholder-ready reports. Teams use a drag-and-drop builder to combine pre-built queries with charts, tables, and visuals—no coding required. A branding layer applies logos, terminology, and labels to align reports with organizational standards. The result is fast, flexible reporting that demonstrates exposure reduction to executives, managers, and analysts.

Build custom exposure reports using live device and network data.

Filter and group data by asset, zone, or risk condition.

Why RedSeal Report Studio Is Different

Unlike generic BI tools or static templates, RedSeal Report Studio is purpose-built for exposure management and reporting on real environmental risk.

- **Grounded in exposure management** – Built on RedSeal's hybrid exposure model to show where risk is being reduced
- **Beyond canned reports** – Create new reports or adapt existing ones without rigid templates
- **Persona-specific and board-ready** – Deliver role-based insights for analysts, managers, CISOs, and executives
- **Branded for credibility** – Apply organizational logos, terminology, and standards
- **Fast and reusable** – Build once and adapt for multiple audiences in minutes

Example Use Cases

Turn RedSeal insights into compliance evidence, ROI dashboards, and tailored stakeholder reporting.

Executive ROI Reporting – Show reduced exposure and security posture improvements using branded reports

Compliance Alignment – Map exposure findings to PCI, NIST, and industry frameworks

Complex Network Segmentation – Report on access zones and exposure paths across IT, OT, and cloud

Persona-Specific Dashboards – Tailor reporting for SecOps, NetOps, and CISOs
