SOLUTION BRIEF | MAPS & INVENTORY

RedSeal Stratus

Visualize Your Complete AWS and Azure Architecture with Maps and Inventory

Map Your AWS and Azure Infrastructure Including Connectivity Paths

Automatically group and visualize AWS and Azure infrastructure by accounts, subscriptions, VPCs, and VNets

Stratus automatically groups all accounts under AWS and Azure and all VPCs under their respective accounts and subscriptions. Associated gateways and router functions are associated at the right account, subscription, VPC and VNet levels. Your security teams save time with immediate groupings of all your AWS and Azure information for quick visibility and validation — without having to perform manual organization.

Visualize the scale of your environment

The platform creates a tree hierarchy of your AWS environments that shows the count of gateways/VPC routers at the AWS and Azure, account and subscription, VPC and VNet levels, giving you a high-level view into the scale of your AWS and Azure environment, and then the ability to drill down into any resource for more details.

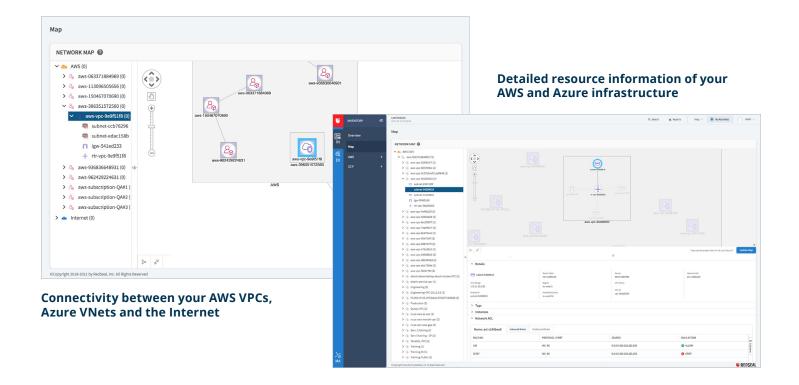

Show connectivity between AWS accounts, VPCs and the Internet

RedSeal Stratus creates a visual map with links representing the connectivity and paths between AWS and Azure accounts, subscriptions, VPCs, VNets and the Internet. Security teams get a quick and clear view of the connectivity within their AWS and Azure environment across all accounts and subscriptions.

Accurately bring all your Amazon Web Services and Microsoft Azure infrastructure into a single comprehensive visualization. With RedSeal Stratus, you can:

- View a map of all AWS accounts, Azure subscriptions, VPCs, VNets, gateways and subnets
- Visualize the connections between your AWS and Azure resources, including accounts and subscriptions
- View your complete AWS and Azure infrastructure and drill down to find details in milliseconds

Understand the structure and configuration of your AWS and Azure cloud

From the map view, quickly locate accounts, subscriptions, VPCs, VNets, and subnets and drill down into their details.

Quickly Find Your Relevant AWS and Azure Inventory

Return immediate search results and details

Native CSP tools make it difficult for users to find the data they are interested in. AWS and Azure customers have many accounts, and it is laborious to find details quickly without having to log into multiple instances. Stratus automatically aggregates of all your AWS and Azure information such as accounts, subscriptions, VPCs, VNets, gateways and instances into a unified, up-to-date view. Query from your accounts, VPCs, VNets, gateways and instances and get detailed resource information in milliseconds. Lastly, discovery of your inventory is continuous and correlated through scheduled data collections.

ABOUT REDSEAL (redseal.net)

RedSeal — through its cloud security solution and professional services — helps government agencies and Global 2000 companies measurably reduce their cyber risk and show where their resources are exposed to the internet.

Only RedSeal's award-winning cloud security solution can bring all network environments– public clouds (AWS, Microsoft Azure, Google Cloud Platform and Oracle Cloud), private clouds, and on premises — into one comprehensive, dynamic visualization. RedSeal verifies that networks align with security best practices; validates network segmentation policies; and continuously monitors compliance with policies and regulations. It also prioritizes mitigation based on each vulnerability's associated risk. The company is based in San Jose, California.
