VULNERABILITY MANAGEMENT WITH REDSEAL

CVSS 9
No access to critical assets or untrusted

CVSS 6
Exposed to untrusted

CVSS 7
Has access to critical assets

CVSS 4
Is a critical asset

WHICH VULNERABILITIES REPRESENT THE HIGHEST RISK TO YOUR NETWORK?

DO YOU HAVE UNINTENDED GAPS IN YOUR SCAN COVERAGE?

With RedSeal you can:

- Prioritize vulnerabilities based on network context.

- Validate vulnerability scan coverage and highlight un-scanned subnets.

- Centralize scoring and prioritization from multiple scanner types.

REDSEAL ADDS VALUE TO EACH PHASE OF A VULNERABILITY MANAGEMENT PROGRAM.

DISCOVERY	→	ASSESSMENT	→	TRIAGE	→	REMEDIATION AND MITIGATION

DISCOVERY

Generate scanner target lists and identify unscanned assets

ASSESSMENT

- Visualize all reachable assets for optimal scanner placement.
- Identify network devices and configuration rules preventing scanner access.

TRIAGE

Prioritize vulnerabilities based on your network context—including severity, asset value, as well as upstream and downstream access.

REMEDIATION AND MITIGATION

Identify precise access paths and devices to update so you can isolate and contain vulnerable assets you can't patch.

Score each vulnerability for risk, based on:

- Access from untrusted networks
- Vulnerability severity
- Asset business value
- Proximity and access to and from high value assets

Mitigate unpatched vulnerabilities by containing or isolating them

- Find vulnerable assets and their locations in your network
- Discover all assets accessible by an impacted system
- Identify precise access paths

Discover coverage gaps

- Identify subnets missed by vulnerability scanners
- Visualize all reachable assets for optimal scanner placement
- Identify network devices and rules preventing scanner access

---

Show how you're reducing risk from vulnerabilities with RedSeal's Digital Resilience Score.

"What RedSeal does, is act as a force multiplier for every other security device within a network"

CSO Review

Combine data from multiple scanners and vendors into one model.

GET MORE FROM YOUR CURRENT VULNERABILITY MANAGERS.

RedSeal integrates with industry-leading vulnerability scanners and overlays their input onto your network model. By identifying gaps in your coverage and prioritizing all findings based on accessibility as well as asset value and vulnerability severity, we help to maximize your vulnerability management investment.

RedSeal also pushes scan coverage analysis to Rapid7 and Tenable dashboards so you can manage vulnerabilities from one, familiar interface.
