

Palo Alto Networks® and RedSeal Partnership

Technology Segment: Network Security Configuration and Risk Management

The Palo Alto Networks Technology Partner Program includes a select group of partners that deliver solutions or products that interoperate with the next-generation firewall.

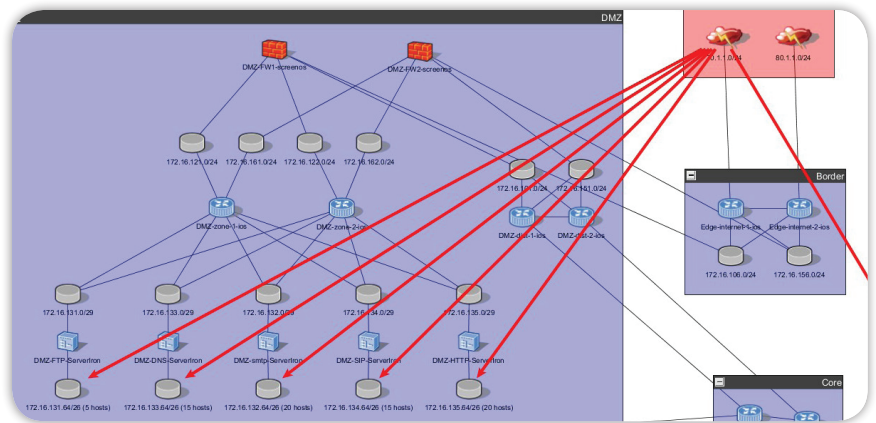

HIGHLIGHTS

- Pinpoint weaknesses with end-to-end network visibility, including hosts
- Dynamically model access to the network and critical assets
- Predictive threat modeling and metrics to maximize efficiency
- Policy change exposure and impact assessments
- Automated and exposure-based remediation prioritization

SOLUTION OVERVIEW

Large, complex networks require the implementation and management of thousands of access rules. It can be difficult to determine the devices and rules that are responsible for unwanted access. Unwanted open access paths that contain vulnerabilities can leave organizations open to attack and allow an intruder to gain access to critical data systems.

To increase operational efficiency and reduce risk, Palo Alto Networks and RedSeal have partnered to ensure uniform visibility, defense and ongoing management of an organization's entire firewall and network device infrastructure.

RedSeal - precise visualization of network access paths and the prioritization of network risk

RedSeal is a proactive security management solution that provides continuous monitoring of the predefined access paths within corporate and government network environments. It gathers configuration of all network devices including firewalls, routers and load balancers to build a virtual model of an enterprise network by analyzing how the rules on these devices work together to protect business assets. RedSeal can also validate access configurations against governmental and industry-driven compliance regulations, as well as internally defined security policies.

RedSeal's integration with the Palo Alto Networks next-generation firewall ensures uniform visibility, defense and ongoing management of an organization's entire firewall and network device infrastructure. The combination of Palo Alto Networks next-generation firewalls and RedSeal allows end-users to visualize their network topology, validate end-to-end access routes, import vulnerability scan data to prioritize remediation efforts, and continuously monitor and track changes to ensure ongoing compliance.

PALO ALTO NETWORKS

Palo Alto Networks® (NYSE: PANW) is the leading next-generation network security company. Its innovative platform allows enterprises, service providers, and government entities to secure their networks by safely enabling the increasingly complex and rapidly growing number of applications running on their networks and by providing prevention against cyberthreats. The core of the Palo Alto Networks platform is its Next-Generation Firewall, which delivers application, user, and content visibility and control integrated within the firewall through its proprietary hardware and software architecture. Palo Alto Networks products and services can address a broad range of network security requirements, from the data center to the network perimeter, as well as the distributed enterprise, which includes branch offices and a growing number of mobile devices. Palo Alto Networks products are used by more than 12,500 customers in over 100 countries.

REDSEAL

RedSeal provides a cybersecurity analytics platform to Global 2000 organizations that certifies evolving networks are secure and accelerates compliance initiatives. Companies are increasingly challenged with network complexity that far exceeds their ability to effectively understand and manage. RedSeal's advanced analytics engine creates a functioning model of your network, tests your network to identify security risks, prioritizes needed actions, and gives you critical information to quickly remediate issues. The result: reduced cybersecurity risk and lower maintenance and incident response costs. RedSeal serves customers in North America, Europe, and Asia that include leaders in finance, retail, technology, utilities, service providers, and government, all served by RedSeal's channel partner network. RedSeal also partners with leading security companies to provide comprehensive security solutions. For more information, please visit RedSeal.co.
