

Braving the Cloud Storm:

Ensuring Visibility Across Hybrid Environments

MeriTalk in partnership with RedSeal, explored the challenges of comprehensive hybrid-cloud security, the need for improved visibility, and how to find calm in the cloud storm.

CLOUDS FORMING

of public sector IT managers say the COVID-19 pandemic amplified the **importance of migrating** to hybrid cloud¹

NOT FAST ENOUGH

are trying to adapt cybersecurity strategies accordingly, but say it's **not fast enough** for evolving cloud environments²

SECURITY SURGE

When it comes to hybrid strategies, Feds say

is their **#1** consideration¹

How are Feds securing systems?¹

48%

Improving continuous monitoring capabilities

41%

Improving consistency between on-premises and cloud security

35%

Increasing information sharing

LOW VISIBILITY

While 93% of Federal multi-cloud users have taken steps to improve visibility²

just 37% say their current visibility is excellent²

Organizations with the most problematic visibility are experiencing **twice as many** cybersecurity incidents³

BLUSTERING COMPLEXITY

Government IT decision makers also report **increased complexity** along with the **increased use of cloud environments**⁴

89%

While 89% say consistency is critical to connecting teams and processes across cloud platforms, fewer than **one in three** believe their agency is architecting for integration and flexibility⁵

73%

of organizations struggle to clearly delineate between their cloud security provider's (CSP's) security responsibilities and their own⁶

LIFTING THE SECURITY FOG

RedSeal helps agencies find calm in the cloud storm by identifying:⁷

Exactly what resources exist and where they are, across all environments

If any of those resources are unintentionally exposed to the internet

What access is possible within and between cloud and on-premises environments

The riskiest vulnerabilities in the cloud, so they can be remediated first

To learn how RedSeal's cloud security solution brings all agency network environments – public clouds, private clouds, and on premises – into one comprehensive, dynamic visualization, visit:
